1. General Description

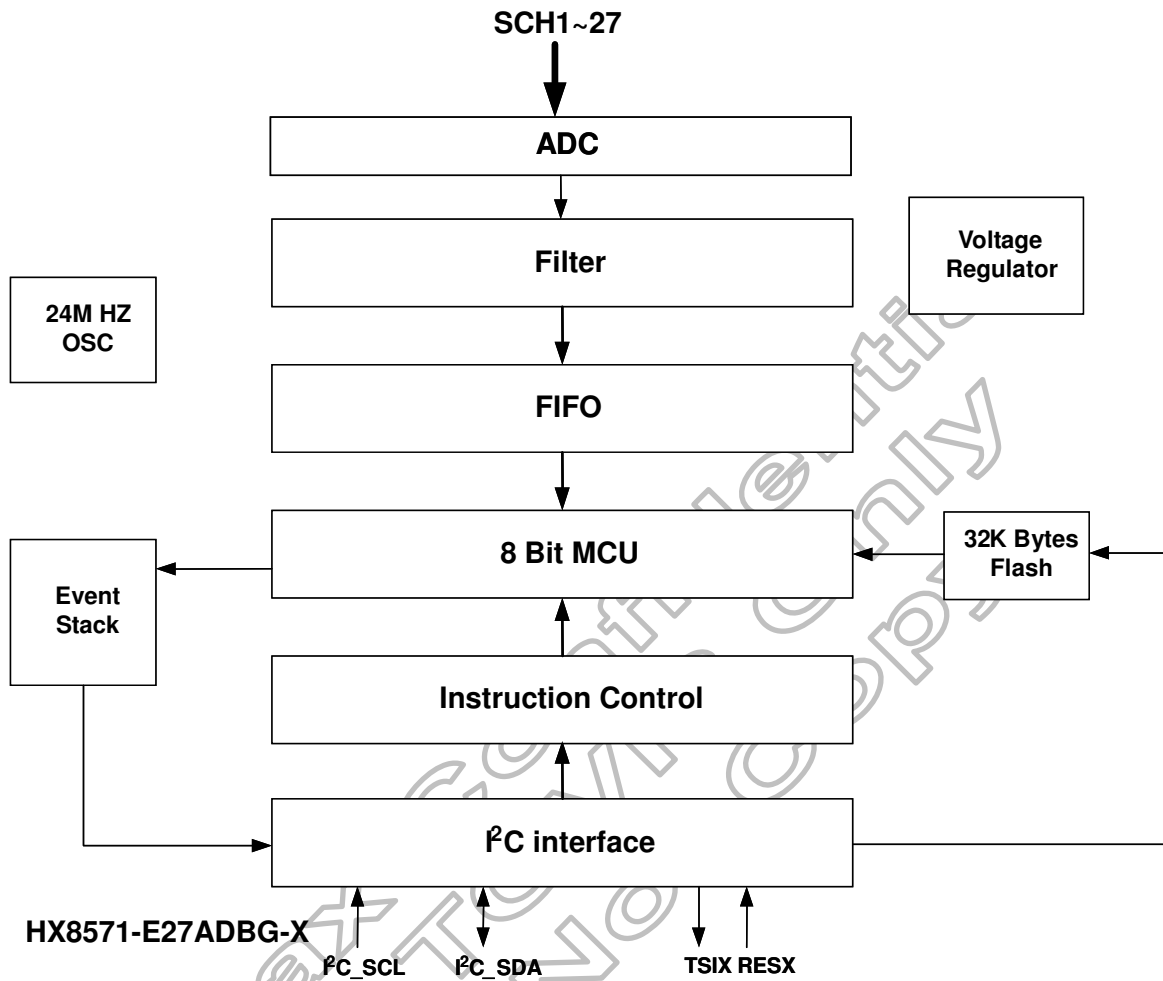

HX8571-E27ADBG-X is a capacitive touch screen control IC designed for I²C interface that supports touch screen of 27 sensing channels I/O. HX8571-E27ADBG-X also provide flexibility and selective functionality solution for the variety application of touch screen.

HX8571-E27ADBG-X supports the flash memory to store calibration data and application parameters. HX8571-E27ADBG-X is suitable for any capacitive touch screen application combined with high performance controller and friendly user interfaces, and wide operating temperature range.

2. Features

- Projective touch screen control IC
- Programmable scan line
- Support 27 channels I/O
- Both self capacitance and mutual capacitance technology adopted
 - HX8571-E27ADBG-X for multi touch (**all points**)
- Low power consumption
- Auto noise filter function
- Support I²C interface
- Customer function design (**embedded with RDC8051**)
 - 256 byte scratchpad RAM interface
 - 12K byte external RAM
 - 32K flash program memory address space
- 2.7V to 3.6V operating voltage
 - VCCA(**Analog power**): 2.7V to 3.6V
 - VCCD(**Digital power**): 1.65V to 3.6V
- Temperature range: -40 ~ +85 °C
- Flash memory to store calibration data and application parameters

11	In/Out	SCH11	Touch screen channel (SCH11).
12	In/Out	SCH12	Touch screen channel (SCH12).
13	In/Out	SCH13	Touch screen channel (SCH13).
14	In/Out	SCH14	Touch screen channel (SCH14).
15	Power	VSS	Ground connection.
16	In/Out	SCH15	Touch screen channel (SCH15).
17	In/Out	SCH16	Touch screen channel (SCH16).
18	In/Out	SCH17	Touch screen channel (SCH17).
19	In/Out	SCH18	Touch screen channel (SCH18).
20	In/Out	SCH19	Touch screen channel (SCH19).
21	Power	VSS	Ground connection.
22	In/Out	SCH20	Touch screen channel (SCH20).
23	In/Out	SCH21	Touch screen channel (SCH21).
24	In	XRES	Active low external reset.
25	Out	TSIX	Touch Screen Interrupt. Touch screen Interrupt line; Interrupt active when the line is low.
26	Output	TEST_RX	Test pin. It is for internal test or GPIO pin used. Let it open if not used.
27	IO	I ² C_SDA ⁽¹⁾	Data line for I ² C interface. Connect the optional damping resistance 150 Ohms if I ² C trace length on main board is approximate or larger than 100mm.
28	In	I ² C_SCL ⁽¹⁾	Serial clock lines for I ² C interface. Connect the optional damping resistance 150 Ohms if I ² C trace length on main board is approximate or larger than 100mm.
29	Power	VCCD	Digital power supply voltage. The range is 1.65V ~ 3.6V. Connect the optional stabilizing capacitor 1μF.
30	Power	VSS	Ground connection.
31	Power	VCCA	Analog power supply voltage. The range is 2.7V ~ 3.6V. Connect the optional stabilizing capacitor 1μF.
32	Power	CVDD	Connect the optional stabilizing capacitor 1μF.
33	Power	VCIOUT	Connect the optional stabilizing capacitor 0.1μF.
34	In/Out	SCH22	Touch screen channel (SCH22).
35	In/Out	SCH23	Touch screen channel (SCH23).
36	In/Out	SCH24	Touch screen channel (SCH24).
37	Power	VSS	Ground connection.
38	In/Out	SCH25	Touch screen channel (SCH25).
39	In/Out	SCH26	Touch screen channel (SCH26).
40	In/Out	SCH27	Touch screen channel (SCH27).

Note: (1) The HX8571-E27ADB-G-X QFN only support I²C interface and the slave address is 90/94h.

5. Pin Assignment

5.1 HX8571-E27ADBG-X 40-pin QFN

6. Package Information

	MIN	MAX	MIN	MAX
①	1.60	2.00	3.60	4.00

NOTES :

1. ALL DIMENSIONS ARE IN MILLIMETERS.
2. DIMENSION b APPLIES TO METALLIZED TERMINAL AND IS MEASURED BETWEEN 0.15mm AND 0.30mm FROM THE TERMINAL TIP. IF THE TERMINAL HAS THE OPTIONAL RADIUS ON THE OTHER END OF THE TERMINAL, THE DIMENSION b SHOULD NOT BE MEASURED IN THAT RADIUS AREA.
3. BILATERAL COPLANARITY ZONE APPLIES TO THE EXPOSED HEAT SINK SLUG AS WELL AS THE TERMINALS.

7. Absolute Maximum Ratings

Parameter	Symbol	Spec.			Unit
		Min.	Typ.	Max.	
Supply voltage	V_{IN}	-0.3	-	7	V
Switch control signals output current	Output current	-	50	-	mA
Enable control voltage range	Logic Input	-0.3	-	$V_{IN}+0.3$	V
Output control driver	Output voltage	-0.3	-	V_{IN}	V

8. Thermal Information

Parameter	Symbol	Spec.			Unit
		Min.	Typ.	Max.	
Operating junction temperature	T_J	-40	-	125	°C
Operating temperature range (Ambient)	T_{OP}	-40	-	85	°C
Storage temperature range	T_{STG}	-55	-	150	°C
Lead soldering temperature, 10 seconds	-	-	-	260	°C
Power dissipation @ $T_A=25^{\circ}C$ (no load, fop=100kHz)	P_D	-	-	50	mW
Thermal resistance	θ_{JA}	-	-	60	°C/W

9. ESD Rating

Parameter	Symbol	Spec.			Unit
		Min.	Typ.	Max.	
Human body model	ESD	-	2	-	KV
Machine model		-	200	-	V

10. Electrical Specifications

10.1 DC characteristics

(VCCD=1.65 ~ 3.6V, VCCA=2.7 ~ 3.6V, T_A=-40 ~ 85 °C)

Parameter	Symbol	Condition	Spec.			Unit
			Min.	Typ.	Max.	
Input high voltage	V _{IH}	VCCD=1.65 ~ 3.6V	0.75VCCD	-	VCCD	V
Input low voltage	V _{IL}	VCCA=2.7 ~ 3.6V	0	-	0.25VCCD	V
Output low voltage (SDO)	V _{OL1}	VCCD=1.65 ~ 3.6V I _{OL} =1.0mA	0	-	0.2VCCD	V
Current consumption deep-standby mode (VCCA/VCCD-VSS)	I _{ST(VDD)}	VCCA=3.3V, VCCD=3.3V, T _A =25°C	-	20	-	μA
Current consumption active mode (VCCA/VCCD-VSS)	I _{ACTIVE(VDD)}	VCCA=3.3V, VCCD=3.3V, T _A =25°C	-	Note ⁽¹⁾	-	mA
Current consumption idle mode (VCCA/VCCD-VSS)	I _{ACTIVE(VDD)}	VCCA=3.3V, VCCD=3.3V, T _A =25°C	-	Note ⁽²⁾	-	mA
Minimum slew rate of VCCA and VCCD	-	-	1	-	-	V/ms
Ripple voltage of VCCD and VCCA	V _R	VCCA=3.3V, VCCD=3.3V, T _A =25°C	-	-	100	mVp-p

Note: (1) Depend on report rate setting, the range is 7 ~ 10mA.

(2) Depend on report rate setting, the range is 0.6 ~ 0.9mA.

10.2 AC characteristics of the SDA and SCL bus lines for I²C-bus devices

Figure 10.1: I²C timing

Parameter	Symbol	Standard-mode I ² C-bus		Fast-mode I ² C-bus		Unit
		Min.	Max.	Min.	Max.	
SCL clock frequency	f_{SCL}	0	100	0	400	KHz
Bus free time between STOP and START condition	t_{BUF}	4.7	-	1.3	-	μ s
Hold time (repeated) START condition After this period, the first clock pulse is generated	$t_{HD:STA}$	4.0	-	0.6	-	μ s
Low period of the SCL clock (Note1)	t_{LOW}	4.7	-	1.3	-	μ s
High period of the SCL clock (Note1)	t_{HIGH}	4.0	-	0.6	-	μ s
Setup time for a repeated START condition (Note2)	$t_{SU:STA}$	4.7	-	0.6	-	μ s
Data hold time (Note3)	$t_{HD:DAT}$	0	-	0	0.9	μ s
Data setup time (Note4)	$t_{SU:DAT}$	250	-	100	-	ns
Rise time of both SDA and SCL signals (Note6)	t_R	-	1000	-	300	ns
Fall time of both SDA and SCL signals (Note6)	t_F	-	300	-	300	ns
Setup time for STOP condition	$t_{SU:STO}$	4.0	-	0.6	-	μ s
Capacitive load for each bus line (Note5)	C_b	-	400	-	400	pF

- Note:** (1) All values are referred to VIH (0.75VCCD) and VIL (0.25VCCD) level.
 (2) A device must internally provide a hold time of at least 300ns for the SDA signal (referred to the VIH of the SCL signal) in order to bridge the undefined region of the falling edge of SCL.
 (3) The maximum $t_{HD:DAT}$ has only to be met if the device does not stretch the low period (t_{LOW}) of the SCL signal.
 (4) A fast-mode I²C-bus device can be used in a standard-mode I²C-bus system, but the requirement $t_{SU:DAT} \geq 250$ ns must then be met. This will automatically be the case if the device does not stretch the low period of the SCL signal. If such a device does stretch the low period of the SCL signal, it must output the next data bit to the SDA line $t_{Rmax} + t_{SU:DAT} = 1000+250=1250$ ns (according to the standard-mode I²C-bus specification) before the SCL line is released.
 (5) C_b = total capacitance of one bus line in pF.
 (6) If a spark or noise appear on SDA line and keep more than 25ns, START or STOP condition will be identified if SCL line keep high at this time.

11. Interface

11.1 System interface

The HX8571-E27ADBG-X supports I²C interface (NXP(x-Philips) serial interface).

11.2 Transfer protocol (I²C interface)

HX8571-E27ADBG-X support I²C interface that need 2 hardware pin – serial data (SDA) and serial clock (SCL), carry information between the devices connected to the bus. The I²C bus supports serial, 8-bit oriented, bi-directional data transferred at a rate up to 100Kbit/s in the standard-mode, or up to 400Kbit/s in the fast-mode.

The data on the SDA line must be stable during the high period of the clock. The high or low state of the data line can only change when the clock signal on the SCL line is low.

Figure 11.1: I²C signal timing

Within the procedure of the I²C-bus, unique situations arise which are defined as START and STOP conditions. A high to low transition on the SDA line while SCL is high is one such unique case. This situation indicates a START condition. A low to high transition on the SDA line while SCL is high defines a STOP condition. START and STOP conditions are always generated by the master. The I²C bus is considered to be busy after the START condition. The I²C bus is considered to be free again a certain time after the STOP condition.

Figure 11.2: I²C START/STOP

The HX8571-E27ADB-G-X only supports I²C interface and the slave address is 90/94h. In I²C slave mode, HX8571-E27ADB-G-X waits for Master reading the data and acknowledges. Every byte put on the SDA line must be 8-bits long. The number of bytes that can be transmitted per transfer is unrestricted. Each byte has to be followed by an acknowledge bit. Data is transferred with the most significant bit (MSB) first.

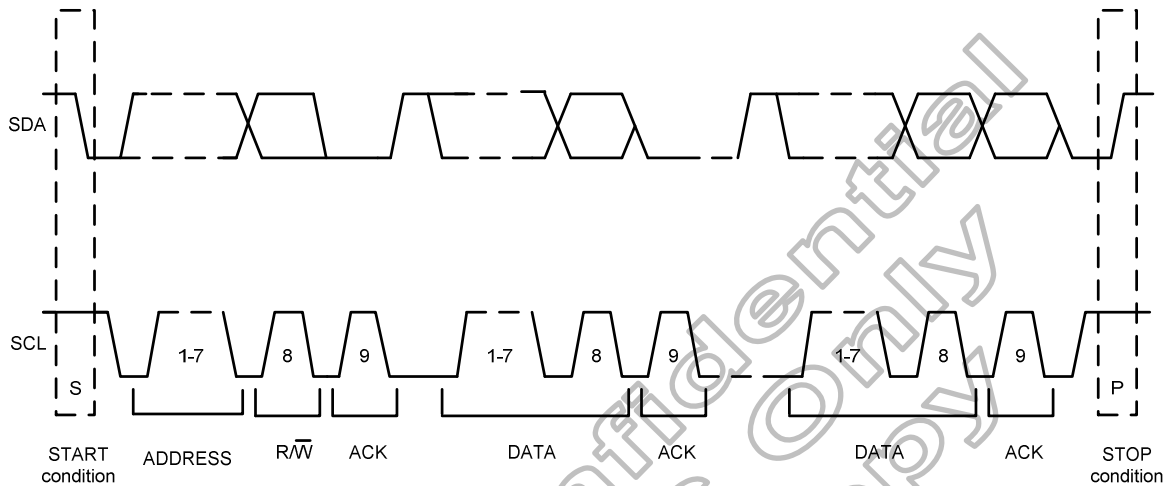

Figure 11.3: I²C data transfer

11.2.1 Format of data frame (I2C interface)

When master sends the command which be received by HX8571-E27ADBG-X, the HX8571-E27ADBG-X will responses the code and data. The format of communication is shown as Figure 11.4. The Command table that is written by master is defined on 14.1 Command list. HX8571-E27ADBG-X wills response the response code first and data later.

Write mode

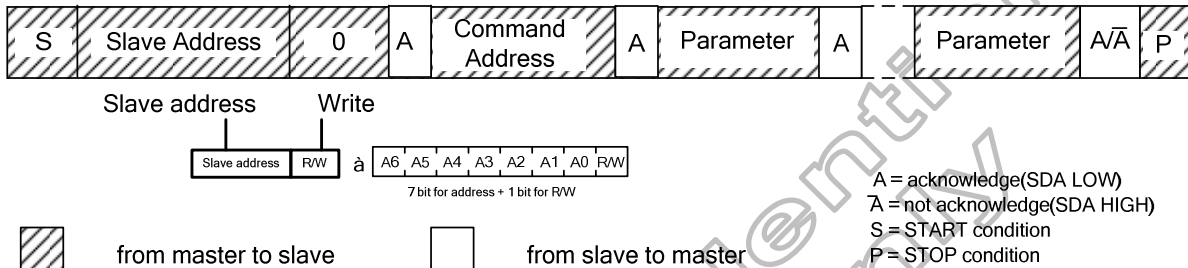

Figure 11.4: Data format of writing mode

Read mode

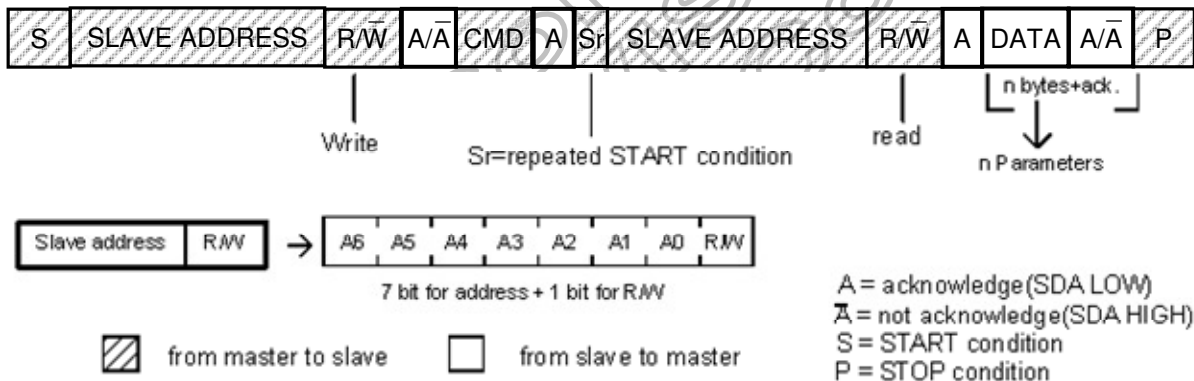

Figure 11.5: Data format of reading mode

12. Hardware Power on Sequence

This part introduces the hardware power on sequence. The initial steps of power on HX8571-E27 touch controller would be specified as follows:

- A. Input VCCA and VCCD power first (Both VCCA and VCCD can be pulled up first). VCCA range will be 2.7~3.6V. VCCD range will be 1.65~3.6V.
- B. XRES PIN could pull high with VCCD at the same time or XRES keep at low level
- C. When VCCA and VCCD voltage are stable, pull the XRES pin to low level or keep low level at least 20 ms.
- D. After a delay of 20 ms, power on sequence has finished and need to write initial commands and settings.

Power On sequence with HW RST

1. VCCA and VCCD power on simultaneously

2. VCCA power on firstly, and then VCCD power on

3. VCCD power on firstly, and then VCCA power on

Power On sequence without HW RST

4. VCCA power on firstly, and then VCCD power on

14.2.2 TS sleep in (80h)

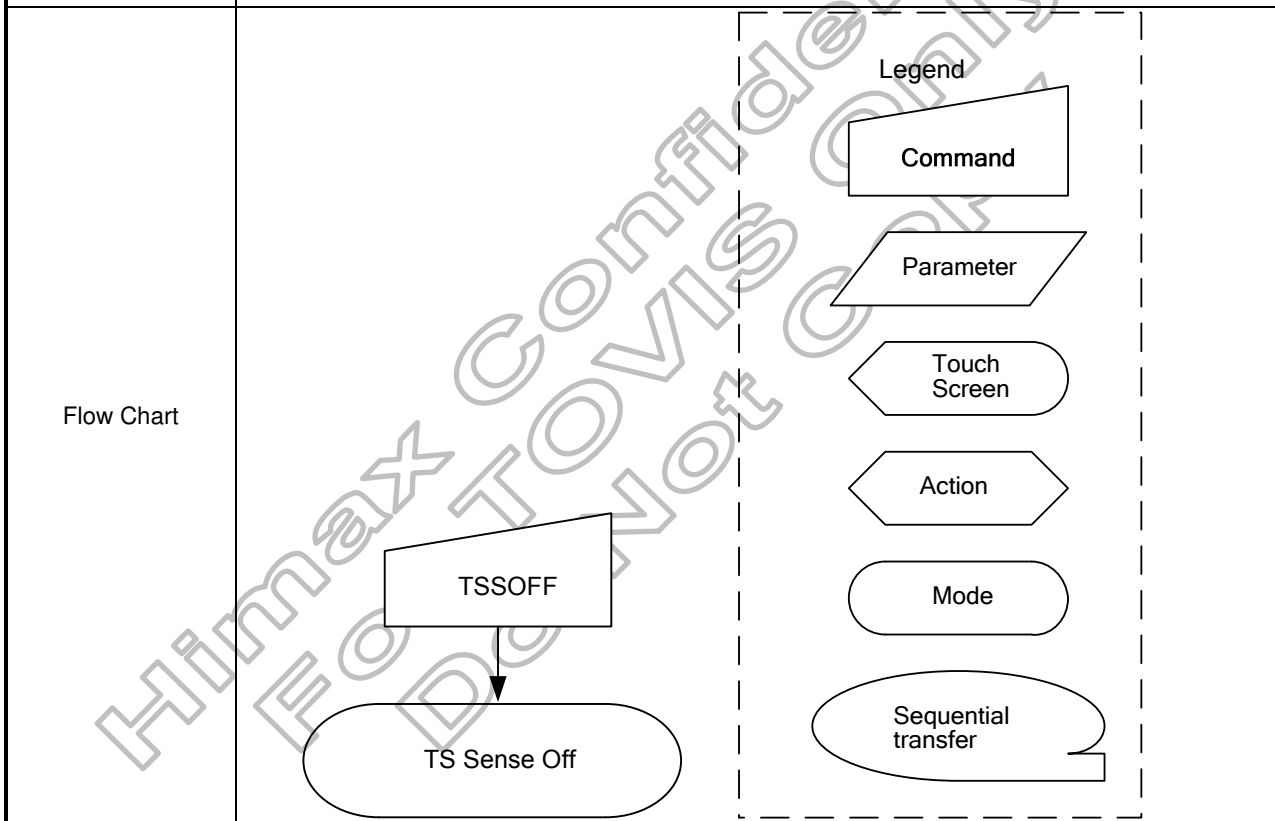

80 H	TSSLPIN (Touch Screen Sleep In)									
	DNC	D7	D6	D5	D4	D3	D2	D1	D0	HEX
Command	0	1	0	0	0	0	0	0	0	80
Parameter	No parameter									
Description	This command causes the touch screen to enter the minimum power consumption mode. MCU interface are register are still working and keeps their contents.									
Restriction	This command has no effect when the touch screen is already in TS Sleep In mode. TS Sleep In Mode can only be left by the TS Sleep Out Command (81h). It will be necessary to wait 5msec before sending next command. This is to allow time for the supply voltages and clock circuits to stabilize. It will be necessary to wait 5msec after sending TS Sleep Out command (when in TS Sleep In Mode) before TS Sleep In command can be sent.

Flow Chart	<pre> graph TD TSSON[TSSON] --> TS_Sense_On([TS Sense On]) </pre> <p>The flow chart illustrates the execution of the TSSON command. A trapezoidal command box labeled 'TSSON' has a downward arrow pointing to a rounded rectangular box labeled 'TS Sense On'. To the right, a dashed-line legend defines the symbols used: a trapezoid for 'Command', a parallelogram for 'Parameter', a rounded rectangle for 'Touch Screen', a hexagon for 'Action', an oval for 'Mode', and an oval with a tail for 'Sequential transfer'.</p>

14.2.9 Clear event stack (88h)

88 H	CLRES (Clear Event Stack)									
	DNC	D7	D6	D5	D4	D3	D2	D1	D0	HEX
Command	0	1	0	0	0	1	0	0	0	88
Parameter	No parameter.									
Description	This command clears event stack when the only return event can be "No Event".									
Restriction	-									
Register Availability	Status					Availability				
	TS Sleep Out					Yes				
	TS Sleep In					Yes				
Default	Status					Default value				
	Power Up Sequence					Empty Stack				
	TS S/W Reset					Empty Stack				
	H/W Reset					Empty Stack				
Flow Chart	<p>The flow chart illustrates the execution of the CLRES command. A trapezoidal symbol labeled 'CLRES' has a downward arrow pointing to a rounded rectangular symbol labeled 'Clear Event Stack'. To the right, a dashed box contains a legend with six symbols: a trapezoid for 'Command', a parallelogram for 'Parameter', a rounded rectangle for 'Touch Screen', a hexagon for 'Action', an oval for 'Mode', and an oval with a tail for 'Sequential transfer'.</p>									

14.2.10 IC part number (D1h)

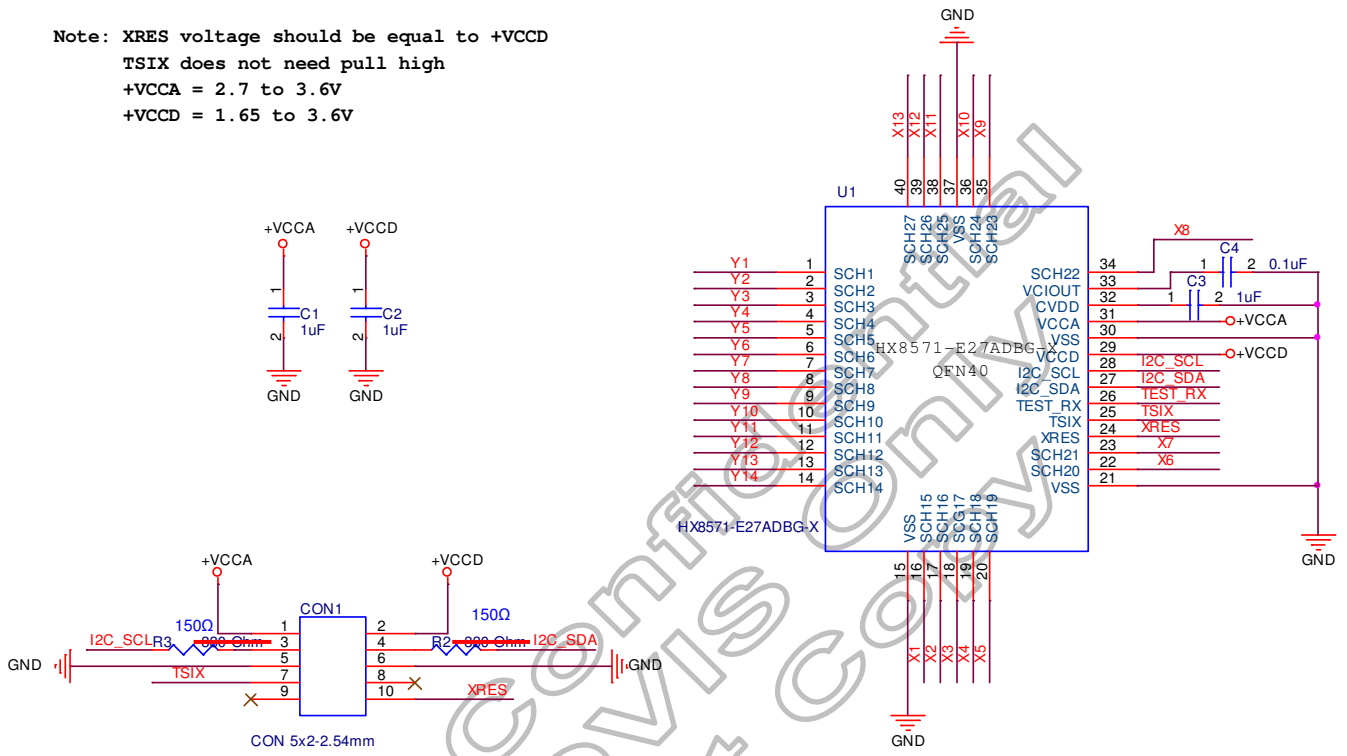

D1H	ID1 (IC Part Number)								HEX
	D7	D6	D5	D4	D3	D2	D1	D0	
Command	1	1	0	1	0	0	0	1	D1
1 st parameter	05								00..FF
2 nd parameter	85								00..FF
3 rd parameter	71								00..FF
Description	When the Device ID command is written, HX8571-E27ADB-G-X will echo the device ID to master. The index of IC part number command is D1h
